

Here's what sets POINT® apart:

USE YOUR SCALE, YOUR WAY.

Employ POINT® as a basic indicator, or add enhancements and integrations.

GET OVER-THE-AIR UPDATES.

Available updates are easily pushed to POINT® via the mobile app.

INTEGRATE POINT® WITH OTHER TECHNOLOGY.

Automate your harvest data by integrating POINT® with other Scale-Tec products like the PULSE™ smart accessory and the cloud-based REAP™ harvest inventory app.

ENJOY REVOLUTIONARY CUSTOMER SUPPORT.

POINT® alerts you if there's a problem within your scale. Call us to remotely diagnose the issue and fix it fast.

GET DATA WHERE IT NEEDS TO GO.

Instantly send harvest data to your crop insurance provider or your agronomist with POINT®, PULSETM and REAPTM.

EASILY SYNC WITH BLUETOOTH DEVICES.

Connect to multiple tablets or smartphones for real-time data and remote scale calibration.

"POINT® works flawlessly, the technology makes me way more efficient, and I'm a lot more confident in getting my bushels to the right destination."

- Scale-Tec customer, Iowa farmer Chris Huegerich

Does your grain cart scale fit your needs today? Will it keep up with tomorrow's technology? Scale-Tec's POINT® indicator can do both.

SCALE (TEC

Keep tabs on your operation in real time with simple, powerful technology that offers reliable, precise weight data right where you need it. That's where POINT® comes in.

Dear [First Name],

Hi, [First Name].

Connect POINT® with REAP™ and PULSE™ to maximize efficiency at harvest time. Scale-Tec's expandable technologies enable you to automatically record and organize weight data with consistency and ease. Minimize errors, eliminate the busywork of manual recordkeeping, and make informed decisions right from the field.

Start with POINT® to accurately weigh your grain in the field.

Use REAP™ to track harvest inventory and instantly sync the data from POINT® across your connected devices.

Add PULSE™ to automate the recording process.

Here's how POINT,® REAP™ and PULSE™ work together during harvest:

- PULSE™ automatically senses when you unload your grain cart into a truck. When the auger engages, the gearbox vibrates, triggering PULSE™ to recognize the load transfer.
- PULSE™ instantly communicates with POINT® and REAP™ to record the weight data and exact location of the load.
- PULSE™ detects when the load transfer completes and instructs POINT® and REAP™ to finalize the load ticket.
- REAP™ summarizes field totals and automatically associates individual load tickets to exact transfer locations. Additionally, REAP™ helps you track how much weight is on a truck, who is operating the grain cart and where the grain will be stored.
- REAP™ instantly syncs your data across all devices connected to your account. Easily share the data with your agronomist, your crop insurance provider or anyone else you choose. Keep your harvest crew informed in real time, and make decisions from the combine.

"It's peace of mind. It's really nice to be able to see things in real time and make decisions right away." – Scale-Tec customer, Texas farmer Allen Meissner

records, access the data in real time and make decisions from the combine?
